

SpiderDAO is a next generation hardware-based DAO governance model that aims to bring a new standard of fairness to existing DAO frameworks.

The Challenge

Traditional DAO models are subject to attack and takeover by plutocracies controlled by wealthy whales.
He who controls the votes, controls the DAO.

"I criticize DAO's because I love them. On-chain algorithms open to vote probing...Plutocracy gives me heartburn."

Vitalik Buterin

The SpiderDAO Solution

We solve this issue by introducing a dual-governance model that bundles hardware & software tools with on-chain elements, providing a 'whale resistant' governance solution.

One Router = One Vote
Tamper-resistant model

Liquidity as Utility Model

Access to SPDR Utility via
Select LP Tokens: Liquidity = Utility

Free VPN for Liquidity Providers

HARDWARE UTILITY

The SpiderConnect Router is a best-in-class router that serves multiple roles as a high-speed VPN tunnel, a DAO voting ticket, and a node in a fully autonomous decentralised VPN which webs the Spider ecosystems together, offering access to the SpiderDashboard with a multitude of features leveraging the Polkadot Parachain. Each Sale participant that contributes \$2k+ will receive a complimentary router.

TOKEN ECONOMICS

Token Ticker: \$SPDR

Token Supply: 1,000,000,000

Effective M/Cap: \$250,000

Sale Price: \$0.02

Vesting: Weekly for 12 weeks

Rounds

Strategic Sale	10%	100,000,000
Liquidity Mining	60%	600,000,000
Liquidity	6%	60,000,000
Team	20%	200,000,000
Advisors	4%	40,000,000
