

SpiderDAO is a next generation hardware-based DAO governance model that aims to bring a new standard of fairness to existing DAO frameworks.

## The Challenge

Traditional DAO models are subject to attack and takeover by plutocracies controlled by wealthy whales.  
*He who controls the votes, controls the DAO.*

"I criticize DAO's because I love them. On-chain algorithms open to vote probing...Plutocracy gives me heartburn."

Vitalik Buterin

## The SpiderDAO Solution

We solve this issue by introducing a dual-governance model that bundles hardware & software tools with on-chain elements, providing a 'whale resistant' governance solution.

### Hardware-enabled DAO Election Process

### Whale-resistant Dual Governance Model

### Global High-speed VPN service

Router

SPDR

User ID

DAO Vote

## TOKEN UTILITY

### Eligibility for DAO Voting Rights

One Router = One Vote  
Tamper-resistant model

### Liquidity as Utility Model

Access to SPDR Utility via  
Select LP Tokens: Liquidity = Utility

### Free VPN for Liquidity Providers

## HARDWARE UTILITY

The Spider Router is a best-in-class router that serves multiple roles as a high-speed VPN tunnel, a DAO voting ticket, and a node in a fully autonomous decentralised VPN which webs the Spider ecosystems together.

Each Sale participant that contributes \$2K+ will receive a complimentary router.

## TOKEN ECONOMICS

Token Ticker: \$SPDR

Token Supply: 1,000,000,000

Initial M/Cap: \$250,000

Sale Price: \$0.02

Vesting: Weekly for 12 weeks

### Rounds

Strategic Sale	10%	100,000,000
Liquidity Mining	60%	600,000,000
Liquidity	6%	60,000,000
Team	20%	200,000,000
Advisors	4%	40,000,000

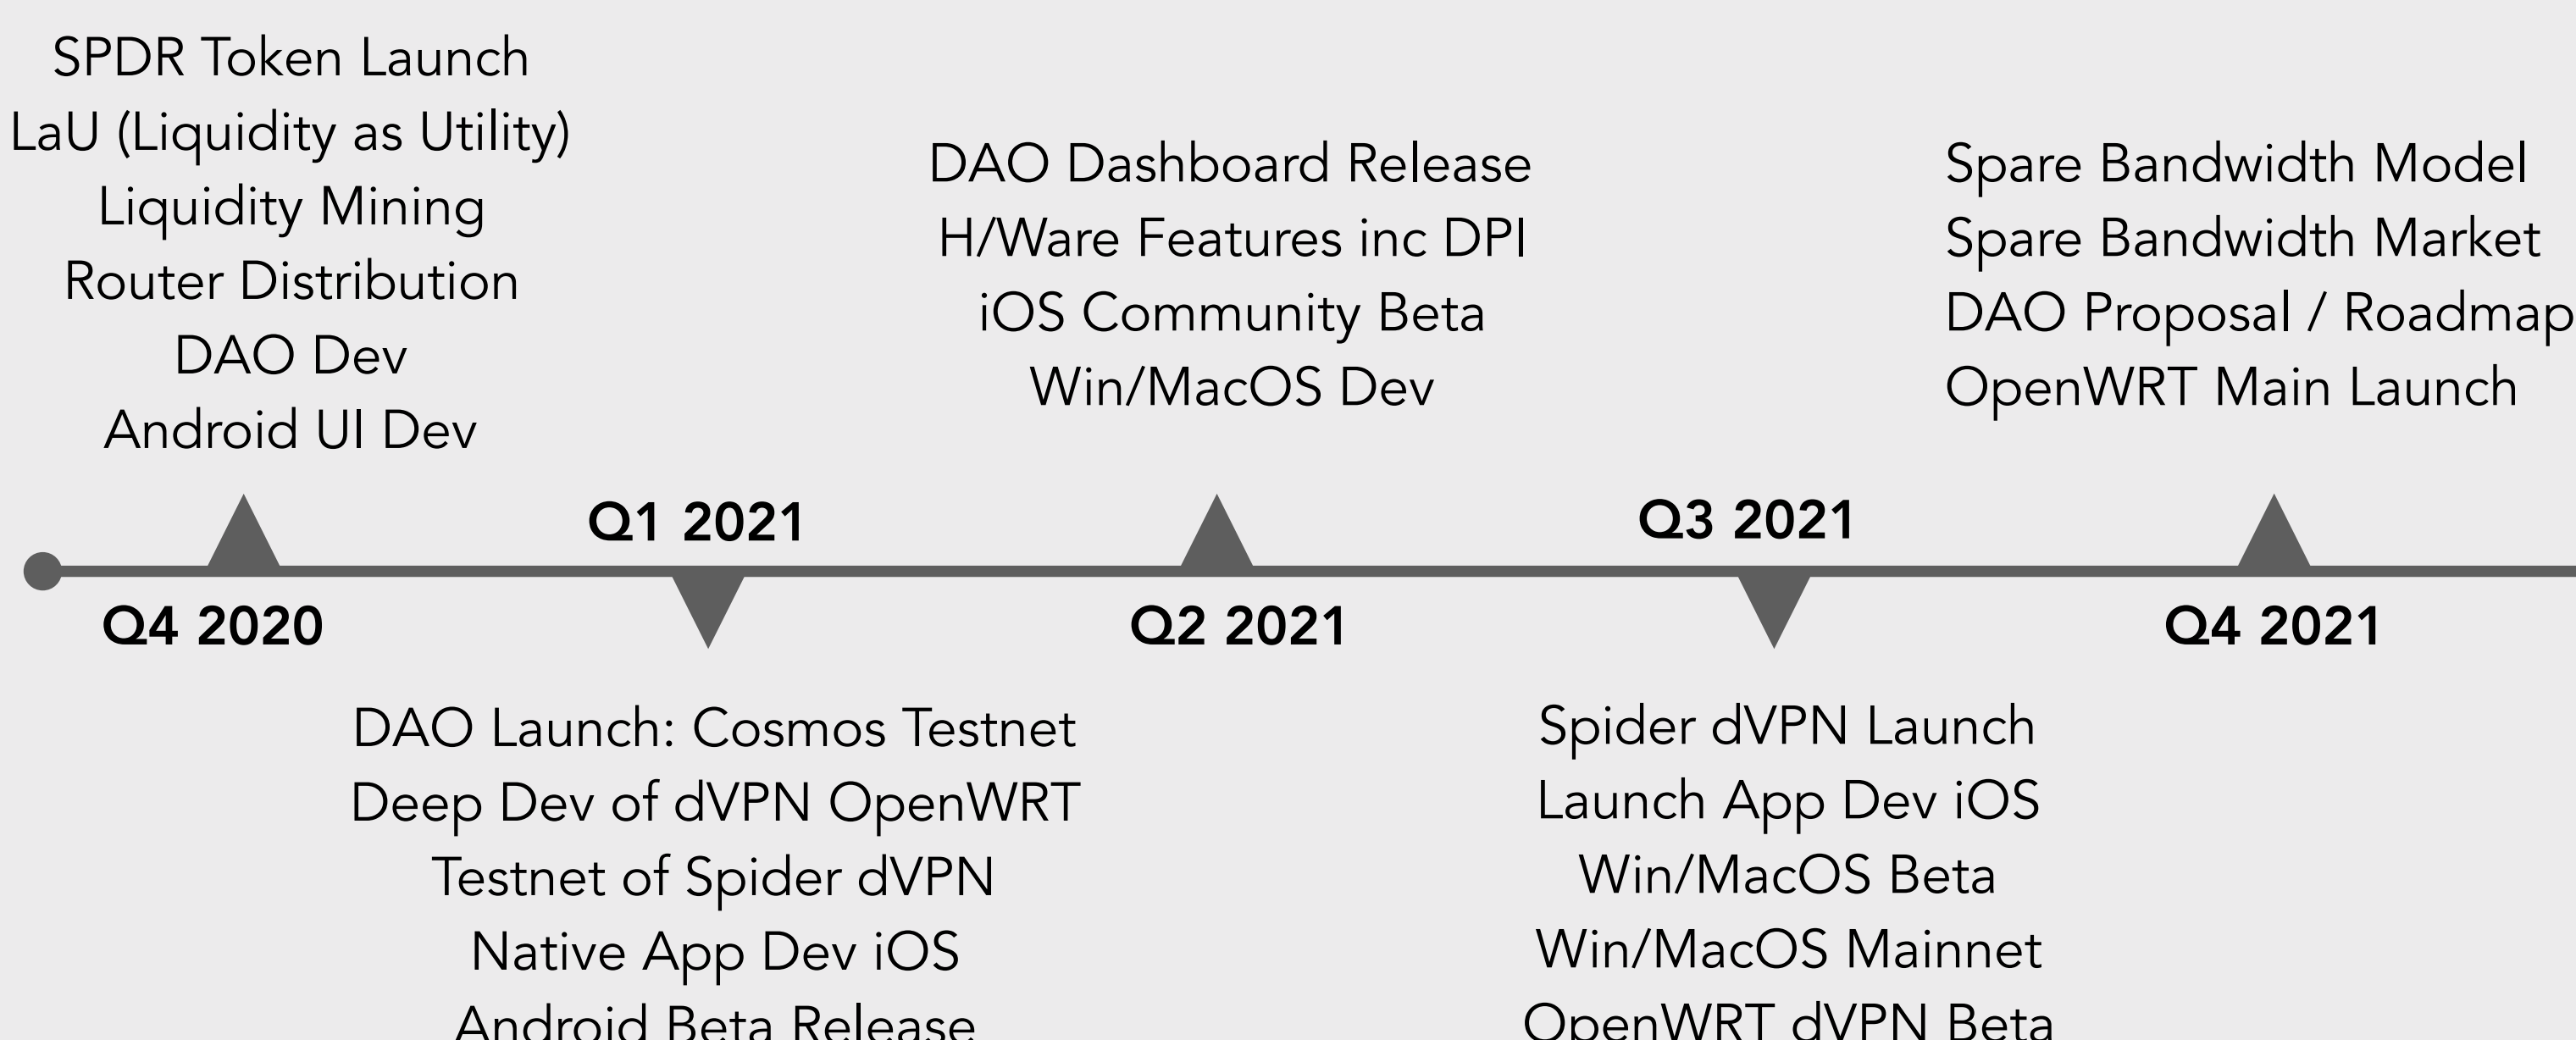

## TRACTION

**18+**  
Countries

**2500+**  
Users

**350TB**  
Monthly Traffic
